# Data and Information Systems (DAIS:) Course Structures at CS/UIUC

- Coverage: Database, data mining, text information systems, Web and bioinformatics
- Data mining
  - Intro. to data warehousing and mining (CS412)
  - Data mining: Principles and algorithms (CS512)
- Database Systems:
  - Intro. to database systems (CS411)
  - Advanced database systems (CS511)
- Text information systems
  - Text information system (CS410)
  - Advanced text information systems (CS510)

# CS 412. Course Page & Class Schedule

- Textbook
  - Jiawei Han, Micheline Kamber and Jian Pei, Data Mining: Concepts and Techniques (3<sup>rd</sup> ed), Morgan Kaufmann, 2011
- Class Homepage: https://wiki.engr.illinois.edu/display/cs412
- Bookmark on course schedule page
- Class Schedule: 9:30-10:45 am Tues./Thurs.@1404
   SC
- Office hours: 10:45-11:30am Tues./Thurs. @2132 SC
- Lecture media: recorded; but class attendance is critical

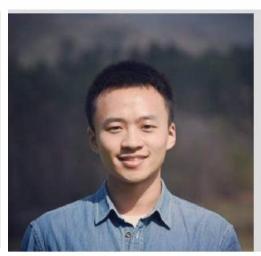

#### CS 412. Fall 2017. Teach Assistants

Carl Yang
(Online Session)

Yu Shi

**Chao Zhang** 

Shi Zhi

- TA office hours: **4-5pm (Mon.), 11-12pm (Wed.)@0207SC.** Additional hours before due date will be announced at Piazza
- Wait list (No wait list at this time, keep attending class, see if there is space available or there is overflow section opening)
  - If you cannot register but still desperately want to get in, please sign on when there is "potential opening": Explain why you have to take the course This Fall!

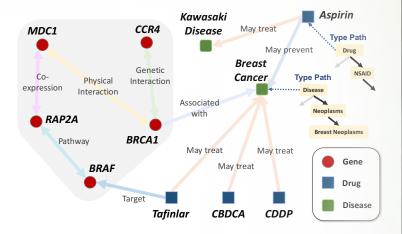

# CS 412. Course Work and Grading

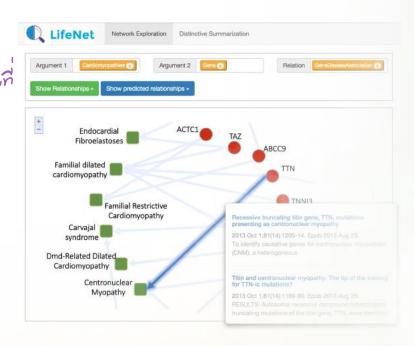

- Assignments, Programming Assignments, and Exams
  - Written Assignments: 15% (three homework assignments expected)
  - Programming assignments: 20% (two programming assignments expected)
  - Midterm exam: 30%
  - Final exam: 35%
- For students taking 4<sup>th</sup> credit (TA will provide concrete instructions on the 4<sup>th</sup> credit project)
  - For students registering 4 credits: 25%. The overall scores will be scaled proportionally
- Need help and/or discussions?
  - Sign on: Piazza (https://piazza.com/illinois/cs412)
- Check your homework/exam scores:
  - Compass

#### ระบบสำหวาและ วิเคราะห์ขอมูลบน เคสื่อ ข่าย ที่ มี โครงสราัง

# Help Needed: LifeNet—A Structured Network-Based Knowledge Exploration and Analytics System for Life Sciences

- What we are doing? เปลี่ยนเอกสารเป็นสาปและรองรับ function
  - A scalable system that transforms biomedical papers into a knowledge graph & supports various search/analytics functions
- What we already have?
  - A working prototype system & an ACL demo paper
- What we are looking for?
  - Students with expertise on HTML/CSS & JavaScript
  - Experiences on web frameworks and databases
  - System design experience will be a big plus
- What you will gain?
  - Hourly pay (\$12-\$15 per hour, 6-20 hours per week)
  - Possible research publications & a good thesis topic

Send us your resume if interested: Jiaming Shen (mickeysjm@gmail.com)

Why Data Mining?

- Summary

# Why Data Mining? ทำไมต้องท่านมืองข้อมูล

WILLE

- The Explosive Growth of Data: from terabytes to petabytes
  - Data collection and data availability
    - Automated data collection tools, database systems, Web, computerized society
  - Major sources of abundant data แนว ข้อมูล ที่สำคัญมากมาย
    - Business: Web, e-commerce, transactions, stocks, ...
    - Science: Remote sensing, bioinformatics, scientific simulation, ...
    - Society and everyone: news, digital cameras, YouTube
- We are drowning in data, but starving for knowledge!
   "Necessity is the mother of invention"—Data mining—Automated analysis of massive data sets

- Why Data Mining?
- What Is Data Mining?

- A Multi-Dimensional View of Data Mining
- What Kinds of Data Can Be Mined?

- What Kinds of Technologies Are Used?
- What Kinds of Applications Are Targeted?
- Major Issues in Data Mining
- A Brief History of Data Mining and Data Mining Society
- Summary

# งะหลือแมื่องรอมูล What Is Data Mining?

• Data mining (knowledge discovery from data)
• Extraction of interesting (<u>non-trivial, implicit</u>, <u>previously unknown</u> and potentially useful) patterns or knowledge from huge amount of data

• Data mining: a misnomer?

• Alternative names: ชื่อทาง เลือก

• Knowledge discovery (mining) in databases (KDD), knowledge extraction, data/pattern analysis, data archeology, data dredging, information harvesting, business intelligence, etc.

Watch out: Is everything "data mining"?

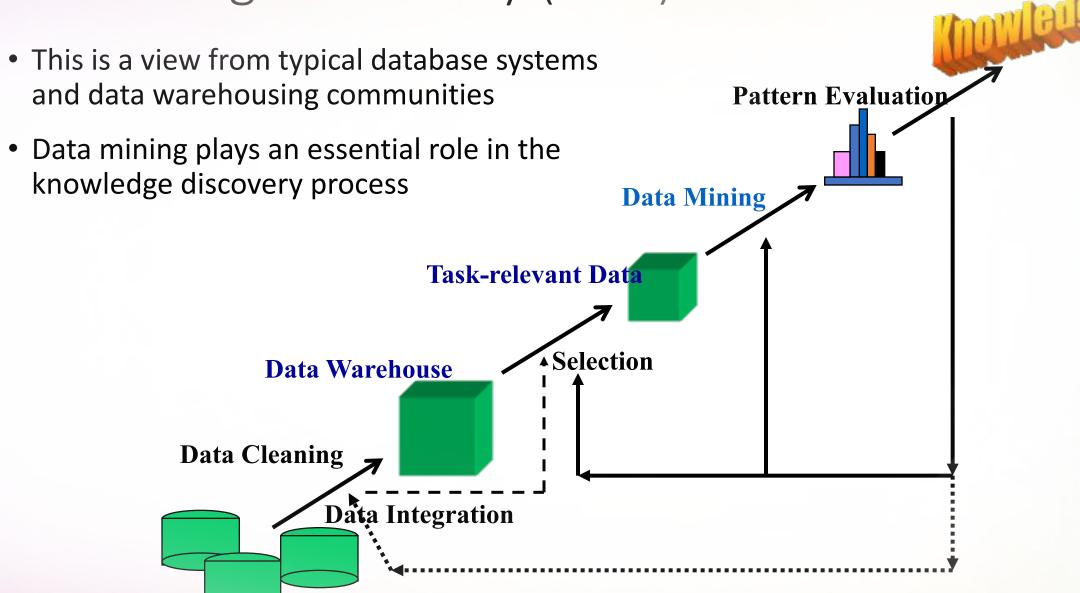

• Simple search and query processing

• (Deductive) expert systems

# Knowledge Discovery (KDD) Process

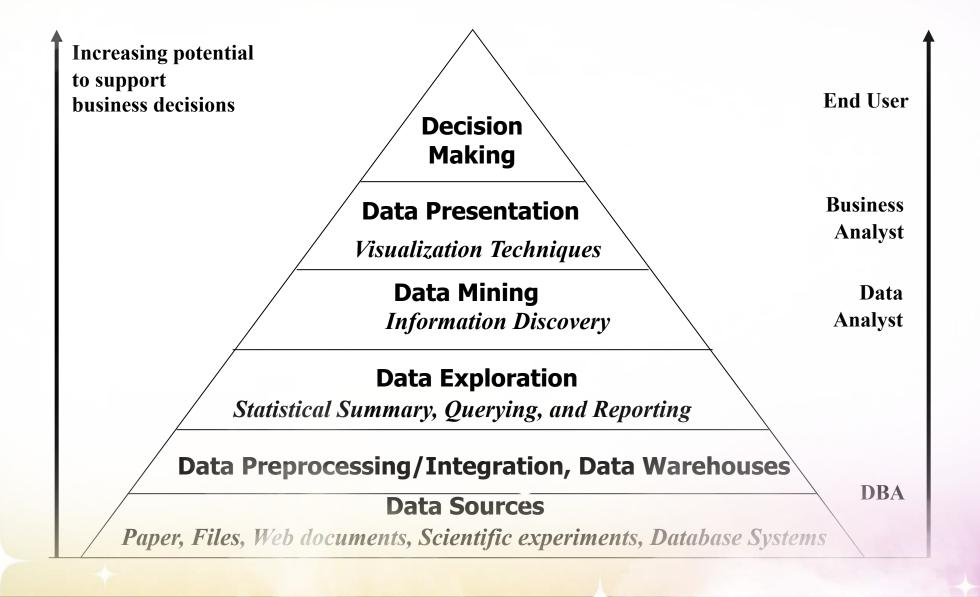

Database

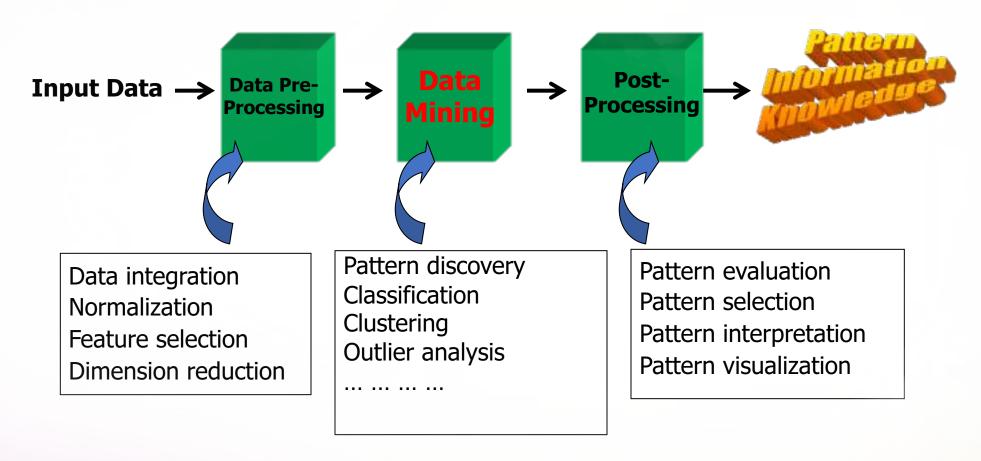

# Example: A Web Mining Framework

- Web mining usually involves
  - Data cleaning
  - Data integration from multiple sources
  - Warehousing the data
  - Data cube construction
  - Data selection for data mining
  - Data mining
  - Presentation of the mining results
  - Patterns and knowledge to be used or stored into knowledge-base

# Data Mining in Business Intelligence

#### KDD Process: A View from ML and Statistics

This is a view from typical machine learning and statistics communities

## Data Mining vs. Data Exploration

- Which view do you prefer?
  - KDD vs. ML/Stat. vs. Business Intelligence
  - Depending on the data, applications, and your focus
- Data Mining vs. Data Exploration
  - Business intelligence view
    - Warehouse, data cube, reporting but not much mining
  - Business objects vs. data mining tools
  - Supply chain example: mining vs. OLAP vs. presentation tools
  - Data presentation vs. data exploration

- Why Data Mining?
- What Is Data Mining?
- A Multi-Dimensional View of Data Mining
- What Kinds of Data Can Be Mined?
- What Kinds of Patterns Can Be Mined?
- What Kinds of Technologies Are Used?
- What Kinds of Applications Are Targeted?
- Major Issues in Data Mining
- A Brief History of Data Mining and Data Mining Society
- Summary

# אנטייטייגאנא, Multi-Dimensional View of Data Mining

- Data to be mined ຂັດ ຊຸລ ກົນຸດາ
  - Database data (extended-relational, object-oriented, heterogeneous), data warehouse, transactional data, stream, spatiotemporal, time-series, sequence, text and web, multimedia, graphs & social and information networks
- Knowledge to be mined (or: Data mining functions)
  - Characterization, discrimination, association, classification, clustering, trend/deviation, outlier analysis, ...
  - Descriptive vs. predictive data mining
  - Multiple/integrated functions and mining at multiple levels
- <u>Techniques utilized</u>
  - Data-intensive, data warehouse (OLAP), machine learning, statistics, pattern recognition, visualization, high-performance, etc.
- <u>Applications adapted</u> <u>Applications adapted</u>
  - Retail, telecommunication, banking, fraud analysis, bio-data mining, stock market analysis, text mining. Web mining, etc.

- Why Data Mining?
- What Is Data Mining?
- A Multi-Dimensional View of Data Mining
- What Kinds of Data Can Be Mined?

- What Kinds of Patterns Can Be Mined?
- What Kinds of Technologies Are Used?
- What Kinds of Applications Are Targeted?
- Major Issues in Data Mining
- A Brief History of Data Mining and Data Mining Society
- Summary

#### Data Mining: On What Kinds of Data? रहार्ठ में न

- Database-oriented data sets and applications
   Relational database, data warehouse, transactional database
  - Object-relational databases, Heterogeneous databases and legacy databases
- Advanced data sets and advanced applications
  - Data streams and sensor data
  - Time-series data, temporal data, sequence data (incl. bio-sequences)
  - Structure data, graphs, social networks and information networks かれない
  - Spatial data and spatiotemporal data
  - Multimedia database
  - Text databases
  - The World-Wide Web

- Why Data Mining?
- What Is Data Mining?
- A Multi-Dimensional View of Data Mining
- What Kinds of Data Can Be Mined?
- What Kinds of Patterns Can Be Mined?
- What Kinds of Technologies Are Used?
- What Kinds of Applications Are Targeted?
- Major Issues in Data Mining
- A Brief History of Data Mining and Data Mining Society
- Summary

# Data Mining Functions: (1) Generalization

(1777) とういとにないいのからからからから

Information integration and data warehouse construction

• Data cleaning, transformation, integration, and multidimensional data model

• Data cube technology

• Scalable methods for computing (i.e., materializing)

multidimensional aggregates

• OLAP (online analytical processing)

• Multidimensional concept description: Characterization and discrimination เดินนอ รักษณะ เละเกราร่อกปฏิบัติ

 Generalize, summarize, and contrast data characteristics, e.g., dry vs. wet region

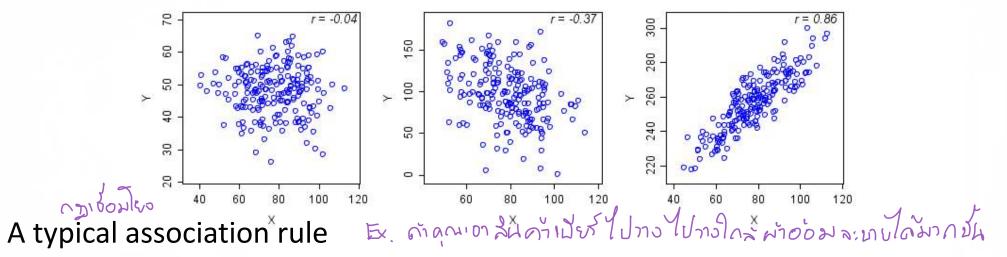

ato my on who series

# Data Mining Functions: (2) Pattern Discovery

• Frequent patterns (or frequent itemsets)

- Association and Correlation Analysis

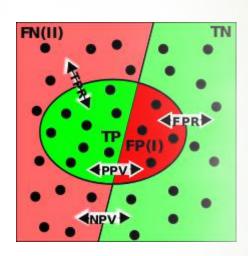

- Diaper  $\rightarrow$  Beer [0.5%, 75%] (support, confidence)
- Are strongly associated items also strongly correlated?
- How to mine such patterns and rules efficiently in large datasets?
- How to use such patterns for classification, clustering, and other applications?

#### のいちいいんりか:177

# Data Mining Functions: (3) Classification

ハスかつ はしかるつ

- Classification and label prediction
  - Construct models (functions) based on some training examples
     Describe and distinguish classes or concepts for future prediction
  - - Ex. 1. Classify countries based on (climate)
    - Ex. 2. Classify cars based on (gas mileage)
  - Predict some unknown class labels
- Typical methods
  - Decision trees, naïve Bayesian classification, support vector machines, neural networks, rule-based classification, pattern-based classification, logistic regression, ...
- Typical applications:
  - Credit card fraud detection, direct marketing, classifying stars, diseases, webpages, ... กาศราจ จับการฉอโกอ ชัพรเครอิกา MI MAIG MIUMSO

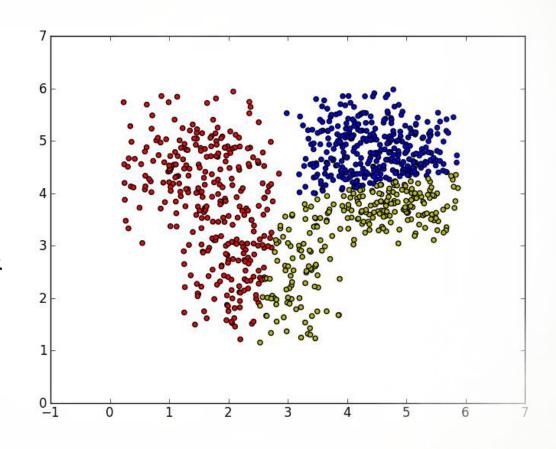

# Data Mining Functions: (4) Cluster Analysis

• Unsupervised learning (i.e., Class label is

Unsupervised learning (i.e., Class label is unknown)

- Group data to form new categories (i.e., clusters), e.g., cluster houses to find distribution patterns
- Principle: Maximizing intra-class similarity & minimizing interclass similarity
- Many methods and applications

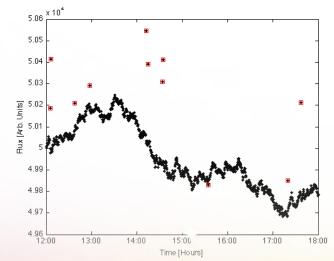

#### กราเคราะห์ค่าผิดบกค Data Mining Functions: (5) Outlier Analysis

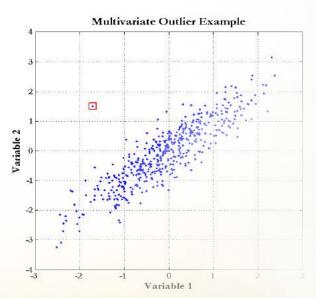

Outlier analysis

- ไห้สอยบรอง บุกฟปพบราม มา กา การจราช
- Outlier: A data object that does not comply with the general behavior of the data ชอบกา หลานเวียง
- Noise or exception?—One person's garbage could be
- another person's treasure

   Methods: by product of clustering or regression analysis, ...
   Useful in fraud detection, rare events analysis

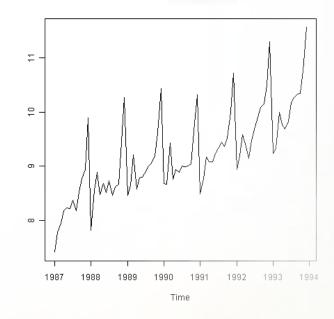

# Data Mining Functions: (6) Time and Ordering: Sequential Pattern, Trend and Evolution Analysis

- Sequence, trend and evolution analysis
  - Trend, time-series, and deviation analysis
     e.g., regression and value prediction
  - Sequential pattern mining
  - e.g., buy digital camera, then buy large memory cards Periodicity analysis

  - Motifs and biological sequence analysis
     Approximate and consecutive motifs
  - Similarity-based analysis
- Mining data streams
  - Ordered, time-varying, potentially infinite, data streams

Data Mining Functions: (7) Structure and Network

Analysis

· Graph mining กรท่าแม้ออกราฟ

• Finding frequent subgraphs (e.g., chemical compounds), trees (XML), substructures (web fragments)

- Information network analysis
  - Social networks: actors (objects, nodes) and relationships (edges)
    - e.g., author networks in CS, terrorist networks
  - Multiple heterogeneous networks
    - A person could be multiple information networks: friends, family, classmates,
  - Links carry a lot of semantic information: Link mining

- Web mining
  - Web is a big information network: from PageRank to Google
  - Analysis of Web information networks

ביבורח מלו: דלו זיח

Evaluation of Knowledge
 Are all mined knowledge interesting? ของเล่าของเล

• Some may not be representative, may be transient, ...

かいかしないないないないので • Evaluation of mined knowledge → directly mine only interesting knowledge?

Descriptive vs. predictive

222010122 Coverage

- Summary

# Data Mining: Confluence of Multiple Disciplines

# עמינאטייטי Why Confluence of Multiple Disciplines?

• Algorithms must be scalable to handle big data

- High-dimensionality of data
  - Micro-array may have tens of thousands of dimensions
- High complexity of data
  - Data streams and sensor data
  - Time-series data, temporal data, sequence data
  - Structure data, graphs, social and information networks
  - Spatial, spatiotemporal, multimedia, text and Web data
  - Software programs, scientific simulations
- New and sophisticated applications

- What Kinds of Technologies Are Used?
- What Kinds of Applications Are Targeted?
- Major Issues in Data Mining
- A Brief History of Data Mining and Data Mining Society
- Summary

# Major Issues in Data Mining (1) ประเดินแล้กใหการของปลุ

- Mining Methodology
  - Mining various and new kinds of knowledge

  - Mining knowledge in multi-dimensional space
     Data mining: An interdisciplinary effort
     Boosting the power of discovery in a networked environment
  - Handling noise, uncertainty, and incompleteness of data
  - Pattern evaluation and pattern- or constraint-guided mining
- User Interaction ( Tamova )
  - Interactive mining
  - Incorporation of background knowledge
  - Presentation and visualization of data mining results

# Major Issues in Data Mining (2)

- Efficiency and Scalability
  - Efficiency and scalability of data mining algorithms
  - Parallel, distributed, stream, and incremental mining methods

9)3/121470

**してりている** 

- Diversity of data types
  - Handling complex types of data

- Summary

  การบุลป้อมูล: การกับทบรูปแบบและ อาณุที่เน่าสหใจจากบ่อมูล จำหาหมหา ศาล

   Data mining: Discovering interesting patterns and knowledge from massive amount of data
- A natural evolution of science and information technology, in great demand, with wide applications
- A KDD process includes data cleaning, data integration, data selection, transformation, data mining, pattern evaluation, and knowledge presentation
- Mining can be performed in a variety of data
- Data mining functionalities: characterization, discrimination, association, classification, clustering, trend and outlier analysis, etc.
- Data mining technologies and applications
- Major issues in data mining
